

Assignment 1

After reading up to and including chapter 3, and attempting the exercises under section 3.14, look at the author's solution for the drawing the grid:
<http://greenteapress.com/thinkpython2/code/grid.py>

Your job is to recreate this project by writing the following functions:

`drawsquare(n)` – should draw an $n \times n$ square.

`drawgrid(a, b, n)` – should draw an $a \times b$ grid of $n \times n$ squares.

`drawsquare(3)` should output

```
+---+
|   |
|   |
|   |
+---+
```

`drawgrid(4,2,3)` should output

```
+---+---+
|   |   |
|   |   |
+---+---+
|   |   |
|   |   |
+---+---+
|   |   |
|   |   |
+---+---+
```

Have your program prompt the user for whether they want to draw a square or grid, and ask the user for dimensions of the square or grid.
